

Securing the Future of U.S. Critical Mineral Supply

Forward-Looking Statements

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

FORWARD-LOOKING INFORMATION

This presentation contains certain forward-looking statements that reflect the current views and/or expectations of Stillwater Critical Minerals Corp. (the “Company”, “Stillwater Critical Minerals”, or “SWCM”) with respect to its business and future events including statements regarding its exploration plans and the Company’s expectations respecting future exploration results, the markets for the minerals underlying the Company’s projects, and growth strategies. Forward-looking statements are based on the then-current expectations, beliefs, assumptions, estimates and forecasts about the business and the markets in which the Company operates. Investors are cautioned that all forward-looking statements involve risks and uncertainties, including: the inherent risks involved in the exploration and development of mineral properties, the uncertainties involved in interpreting drill results and other exploration data, the uncertainties respecting historical resource estimates, the potential for delays in exploration or development activities, the geology, grade and continuity of mineral deposits, the possibility that future exploration, development or mining results will not be consistent with the Company’s expectations, accidents, equipment breakdowns, title and permitting matters, labour disputes or other unanticipated difficulties with or interruptions in operations, fluctuating metal prices, unanticipated costs and expenses, uncertainties relating to the availability and costs of financing needed in the future and regulatory restrictions, including environmental regulatory restrictions. These risks, as well as others, including those set forth in the Company’s filings with Canadian securities regulators, could cause actual results and events to vary significantly. Accordingly, readers should not place undue reliance on forward-looking statements and information. There can be no assurance that forward-looking information, or the material factors or assumptions used to develop such forward-looking information, will prove to be accurate. The Company does not undertake any obligations to release publicly any revisions for updating any voluntary forward-looking statements, except as required by applicable securities law.

TECHNICAL INFORMATION

The scientific and technical information in this presentation has been reviewed by the following non-independent qualified persons (as defined in NI 43-101): (a) in respect of the Stillwater West Project, Mike Ostenson, P. Geo., who is a Project Geologist of the Company; and (b) all other projects of Stillwater Critical Minerals, Debbie James, P. Geo, who is an independent consultant to the Company.

Mineral resources which are not mineral reserves do not have demonstrated economic viability. With respect to “indicated mineral resource” and “inferred mineral resource”, there is a great amount of uncertainty as to their existence and a great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of a “measured mineral resource”, “indicated mineral resource” or “inferred mineral resource” will ever be upgraded to a higher category.

CAUTIONARY NOTE TO U.S. INVESTORS REGARDING RESOURCE ESTIMATES

The terms “mineral resource”, “measured mineral resource”, “indicated mineral resource”, “inferred mineral resource” used herein are Canadian mining terms used in accordance with NI 43-101 under the guidelines set out in the Canadian Institute of Mining and Metallurgy and Petroleum (the “CIM”) Standards on Mineral Resources and Mineral Reserves, adopted by the CIM Council, as may be amended from time to time. These definitions differ from the definitions in the United States Securities & Exchange Commission (“SEC”) Industry Guide 7. In the United States, a mineral reserve is defined as a part of a mineral deposit which could be economically and legally extracted or produced at the time the mineral reserve determination is made. While the terms “mineral resource”, “measured mineral resource”, “indicated mineral resource”, and “inferred mineral resource” are recognized and required by Canadian regulations, they are not defined terms under standards in the United States and normally are not permitted to be used in reports and registration statements filed with the SEC. As such, information contained herein concerning descriptions of mineralization and resources under Canadian standards may not be comparable to similar information made public by U.S. companies in SEC filings. Accordingly, information herein containing descriptions of our mineral deposits may not be comparable to similar information made public by US companies subject to the reporting and disclosure requirements under US federal securities laws and the rules and regulations thereunder.

THIRD-PARTY INFORMATION

Where this presentation quotes any information or statistics from any external source, it should not be interpreted that the Company has adopted or endorsed such information or statistics as being accurate. Some of the information presented herein, including scientific and technical information on third-party projects, is based on or derived from statements by third parties, has not been independently verified by or on behalf of the Company and the Company makes no representation or warranty, express or implied, respecting the accuracy or completeness of such information or any other information or opinions contained herein, for any purpose whatsoever. References to third-party projects herein are for illustrative purposes only and are not necessarily indicative of the exploration potential, extent or nature of mineralization, or potential future results of the Company’s projects.

Portfolio & Strategy

Our Projects

- 100% ownership on two district-scale assets that are adjacent to world-class mines/deposits
- 49% ownership on district-scale high-grade gold asset in northwest Ontario
- 100% ownership of the Duke Island Ni-Cu-PGE project, Alaska
- Back-in right on past-producing Yankee-Dundee Mine, BC

FLAGSHIP ASSET

STILLWATER WEST PROJECT

2023 NI43-101 expanded mineral resource estimate:

1.6Blbs Ni-Cu-Co

3.8Moz Pd-Pt-Rh-Au

- World-class geology shared with major producer Sibanye-Stillwater
- Active and historic mining district
- Exceptional expansion potential

Why is Stillwater Critical?

Stillwater West is a World-Class U.S. Critical Minerals Asset

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

LARGE-SCALE POLYMETALLIC DISTRICT

Hosting 10 minerals listed as critical with expansion potential across 33km

GRADE WITHIN SCALE

High-grade, mid-grade, and bulk tonnage grade polymetallic deposits provide options for mining, market resilience, and interest for major producers

PROVEN MINE MODELS

As one of the largest layered complexes in the world, the Stillwater district is famously metal-rich, with parallels to South Africa's Bushveld complex

PRIME LOCATION

The only primary platinum and palladium active mining district in the USA, adjacent to Sibanye-Stillwater's producing mine complex in Nye, Montana

FULLY FUNDED FOR 2026

\$17M financing completed December 2025

HISTORY

Over 100 years of mineral production, including government subsidies

TEAM

Veteran mine builders with Glencore as strategic partner and senior ex-Ivanhoe geologists to guide expansion

TIMING

With 43,400 meters of drilling complete, Stillwater West is advancing as a large-scale primary source of **10 minerals listed as critical in the USA**

Stillwater's Mission

Securing Critical Mineral Supply in the USA

The Largest Nickel - Platinum Group Metal Project in an Active U.S. Mining District

Stillwater Critical Minerals is focused on advancing world-class resources of **10 critical minerals** at our flagship Stillwater West Ni-Cu-Co-PGE + Au project in the iconic Stillwater mining district in Montana, USA.

Vision: Become a primary U.S. source of low-carbon critical minerals

Well positioned with a world-class team and geology in an expanding and famously metal-rich U.S. mining district

10 minerals that have been identified by the U.S. as critical to the nation's economy, security and electrification

Success in Advancing Major Mining Projects

Michael Rowley

President & CEO, Director

Co-founder of Stillwater Critical Minerals with over 30 years of executive experience in the exploration, mineral processing, and mine environmental industries.

Danie Grobler, Ph.D.

Vice-President, Exploration

World-recognized expert in battery and platinum group metals. 25+ years experience in global exploration, including Head of Geology and Exploration for Ivanhoe Mines.

Albie Brits, P.Geo.

Senior Geologist

28+ years focused on the advancement of projects from grassroots to production. Former Senior Geologist and Manager Project Geology for Ivanhoe Mines.

Greg Johnson

Executive Chairman

More than 30 years in exploration, development of large-scale mining projects raising over \$650 million in project financing. Co-founder of NovaGold Resources.

Gregor Hamilton

Independent Director

Over 29 years experience in mining sector as a geologist, investment banker and entrepreneur. Global experience in capital markets, M&A and structured finance.

Nora Pincus

Independent Director

16+ years senior experience in mine law and finance focused on global capital markets and M&A. Currently Managing Director at Beedie Capital, with past senior roles at Empress Royalty and Nebari Partners.

Gordon Toll

Independent Director

Over \$5B raised in the resource industry with 50+ years experience. Past senior roles with Ivanhoe Mines and Fortescue Minerals, BHP Billiton, and Rio Tinto.

Bradley Adamson

Independent Director

Over 25 years of global experience in nickel and cobalt metallurgy and investments with Glencore PLC, including as V-P Business Development for the nickel group.

Prof. Wolfgang Maier, Ph.D.

Senior Geologic Advisor

25+ years global experience in mafic-ultramafic igneous systems and formation of magmatic ore deposits. 144 publications receiving 5,175 citations to date.

Stillwater with the Federal Delegation from Montana, Feb 2025 (L-R):
Senator Tim Sheehy,
Rep. Troy Downing,
Stillwater CEO Michael Rowley,
Senator Steve Daines,
Rep. Ryan Zinke

Congressman Troy Downing at Stillwater West core shack October 2024:
Quinton Winsted (USG),
Ben Raffety (MMA),
Will Boone (USG),
Michael Rowley (CEO),
Congressman Troy Downing,
Heather Downing,
Justin Modroo (Stillwater)

Tory Kolkhorst, Senator Steve Daines' Field Representative, at Stillwater West September 2024

Stillwater CEO Michael Rowley presents Stillwater West and discusses U.S. critical mineral supply chains with Congressman Troy Downing

Recent Events:

March 20, 2025 – The White House issues an Executive Order entitled 'Immediate Measures to Increase American Mineral Production' continuing the government's focus on rapidly building domestic supply chains.

May 2, 2025 – The White House includes Sibanye's Stillwater Mine on the second list of priority mining projects, recognizing the importance of the Stillwater district in critical mineral production.

January 2026 – US government stockpiling minerals, especially copper, platinum and palladium, also nickel.

March 6, 2026 – Rep. Troy Downing appointed to House Committee on Natural Resources

A history of responsible production and mineral wealth:

- 1852 gold rush
- Dominant North American copper producer by WWI
- **24Blbs of copper to date from Butte area**
- Oil, gas, coal, and mining are major revenues for the state
- A major source of copper, chromium, PGMs, gold, silver, other commodities
- Feb 9th declared Montana Mining Day

Recent industry and government events:

1. FAST-41 at Hecla's Libby project
2. Ivanhoe JV with Brixton Metals at Hog Heaven: \$44.5M for 75%
3. \$1.67B loan from DoE for Montana Renewables' biofuels plant
4. Rio Tinto and USGS partnered for Earth MRI project targeting critical minerals
5. Black Butte Mine receives final permits
6. Bozeman receives Federal funding as a tech hub for photonics, other tech
7. **Sibanye-Stillwater receives 45X tax credits at its smelter-refinery complex**
8. FAST-41 at Sibanye's Stillwater Mine

Platreef Setting

- Big, bulk tonnage 'contact-type' Ni/Cu sulphide deposits with PGEs and gold
- Location of Stillwater Critical Minerals' deposits (surface to 400m depth)
- Global examples include the giant mines on the north limb of the Bushveld (or Platreef): Ivanhoe's Platreef mine and Valterra Platinum's Mogalakwena mine

Platreef-Style Deposits

The World's “Porphyry-Scale” Critical Minerals Deposits

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Platreef-style deposits

The two mines on the Platreef are the largest nickel producers in South Africa and are among the very largest and most profitable nickel and PGE mines in the world.

The Stillwater Layered Mafic-Ultramafic Complex is among the top five largest in the world and shares many similarities with the South Africa's Bushveld Complex.

Ivanhoe's Platreef mine shares the Platreef for a strike length of about 4km. Stillwater West covers the entire lower Stillwater complex at about 33km in length.

Polymetallic Value

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Value at 2023 Resource¹ and Current Prices²:
Attractive and 'Internally Diversified' Commodity Blend

Nickel 1.05 Blbs

Nickel demand continues to grow, driven by EV and alloy demand. Growing environmental and geopolitical concerns with Indonesia/China and Russia as major suppliers.

Chromium 2.3 Blbs

Stillwater district has a long history of **chromium** production (not included in equivalents).

Gold 395 Koz

Gold at co-product levels across Stillwater West, plus drill-defined high-grade gold the Pine target.

Cobalt 91 Mlbs

Cobalt demand from EVs projected to account for 45% of total demand by 2025.

Copper 499 Mlbs

A deficit in **copper** concentrate supply is projected for 2024. By the end of decade EVs are projected to account for around **40% of the green copper** demand.

Palladium 2.05 Moz

Palladium is the catalyst of choice to meet emissions requirements in the majority of ICE applications.

Platinum 1.26 Moz

Platinum is the catalyst of choice in hydrogen fuel cells, and also in the production of green hydrogen. Supply deficit projected for 2026.

Rhodium 115 Koz

Stillwater West

Long-Section Through Current Deposits

Shows the scale of mineralization at Stillwater West, with focus on the Peridotite Zone across the 20-kilometer span that hosts the current deposits.

43,400 meters of drilling define world-class resources of ten minerals listed as critical by the US government. Potential to fast-track production and form a cornerstone of American supply chains based on its location in a historic mining district beside Sibanye-Stillwater's producing mine complex.

Strike-Section Through Recent Chrome Mountain Expansion Drilling

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Strike section a-a', oriented approximately WNW-ESE through the DR deposit area of the CM target, illustrating the subsurface geometry of the Stillwater Igneous Complex to a depth of approximately 600 m below surface (2300 m above mean sea level). The Peridotite Zone (light purple) forms the dominant host stratigraphy, underlain by the Basal Zone (light yellow) and Complex floor (brown-tan). Magmatic layering is defined by gently-folded Ni-PGE-Au-Cr Reef-type/Hybrid units (dark purple), intersected within multiple drill holes. All drill holes (CM2021-04/05, CM2023-01 through CM2023-05, CM2025-01 through CM2025-04) are color-coded by NiEq% on a scale of 0.05-0.45%, with warm colors (yellow-pink) indicating higher grades. 2023 mineral resource grade shells at NiEq > 0.2% shown with yellow blocks. The 2025 holes (CM2025-01 through CM2025-04), positioned to the east of the existing resource shells, tests the down-dip and along-strike extensions of mineralization. The key structural features in the DR target area are labelled, including the Dunite Ridge syncline basal contact, the T7 Thrust, N-shear zones (N1-N7, SHZ2) and Discovery Faults.

OTCQB: **PGEZF**

FSE: **JOG**

2024

2021 - 2023

2017 - 2020

- Initial acquisition, expansion
- Property consolidation
- Data consolidation
- Drill programs
- First IP survey
- Confirm Platreef model
- AI Collaboration with GoldSpot
- 3D model over core area
- Collaboration with USGS

- **First and second resource estimates**
- **Glencore investment**
- Expansion drill campaigns
- Expanded IP survey
- Earn-in agreement by Heritage on Drayton-Black Lake
- **Key additions to technical team and board of directors**
- Refinement of geologic model
- Cornell (DOE funding)

- **\$3.9M Glencore-led financing**
- MMT geophysical survey
- LBL (DOE funding)
- **Geologic model more than doubled to 20km in length**

2025

- **\$8.78M July placement, including Glencore**
- **\$17M December placement**
- Drill campaign

2026 & Beyond

- **Updated resource estimate**
- **2026 drill campaign**
- **Metallurgical studies**
- **PEA and feasibility studies**
- Updates on non-core projects:
 - Kluane
 - Heritage Mining
 - Duke Island
 - Yankee-Dundee

Soil Geochemistry

Highly anomalous precious and base metal values cover 25km strike in lower Stillwater stratigraphy

- High levels of platinum, palladium, gold, nickel, copper and other metals in soil geochemistry across very large areas
- Gold, cobalt, chromium and other metals also highly anomalous across large areas
- Strong soil response proximal to known mineralization in deposit areas provide priority targets and demonstrates the effectiveness of soils as an exploration tool at Stillwater, especially in the Peridotite Zone (PZ)
- Four new kilometer-scale soil anomalies identified (untested to date) including expansion of highly anomalous gold in soils at Pine target area
- Strong spatial correlation with broad, high-level electro-magnetic conductor anomalies

PRECIOUS METALS (Pt, Pd, Au)

BASE METALS (Ni, Cu)

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Large conductivity and chargeability anomalies correspond with sulphide mineralization in drilled areas

See news release January 25, 2023. Mineral Resources are reported at cut-off grades of 0.20, 0.35, and 0.70% NiEq. Cut-off grades and equivalents are based on metal prices of \$9.00/lb Ni, \$3.75/lb Cu, \$24.00/lb Co, \$1,000/oz Pt, \$2,000/oz Pd and \$1,800/oz Au, with assumed metal recoveries of 80% for Ni, 85% for copper, 80% for Co, Pt, Pd and Au, a mining cost of US\$2.50/t rock and processing and G&A cost of US\$18.00/t mineralized material. Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. The quantity and grade of reported Inferred Resources are uncertain in nature and there has been insufficient exploration to define these Inferred Resources as Indicated or Measured. However, based on the current knowledge of the deposits, it is reasonably expected that the majority of Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration.

- Highly conductive +12km-long anomaly corresponds with nickel-copper sulphide mineralization drilled at the west edge of the resource area, in the center of the 32-kilometer-wide project.
- Wide and high-grade nickel, platinum and palladium mineralization returned in 2023 drilling, plus cobalt and copper, confirms the scale and grade of the Stillwater West project and the expansion potential within the Peridotite Zone of the Stillwater Igneous Complex.
- All mineralization remains open in all directions for continued expansion via priority expansion drill holes as shown above.

- Bronzitite Zone
- Peridotite Zone
- Basal Bronzitite Zone
- Basal Metasediment

Drill Data NiEq%

Plunge +39
Azimuth 332

Recent 3D model shows multi-kilometer scale of mineralization at Stillwater West

Focus is on the Peridotite Zone, which is 800 meters thick at Chrome Mountain and spans the layered Stillwater Igneous Complex in parallel to Sibanye-Stillwater's J-M Reef deposit, hosting all of Stillwater West's deposits to date.

Stillwater West

Chrome Mountain - DR/Hybrid Deposit Resource Models with Select Drill Results

- Significant potential to expand existing resources, and at low cost
- Mineralization open in all directions
- Additional expansion drilling planned
- Planned resource update

CZ and Central Deposit Areas – Iron Mountain

TSX-V: **PGE**OTCQB: **PGEZF**

FSE: JOG

- Significant expansion at low discovery cost in 2023 resource update
- IP survey guided drill campaign to high grades and wide mineralized widths
- Open in all directions - further expansion potential demonstrated in multiple adjacent untested anomalies
- Expansion drilling planned

HGR Deposit Area - Iron Mountain

FSE: JOG

OTHER ASSETS

Drayton - Black Lake

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

49% Owner With Heritage Mining on a High-Grade Gold Project in the Active Rainy River District

OVERVIEW

- 142 km² land package adjoining NexGold's +3Moz Goliath Gold Complex (formerly Treasury Metals)
- 30km of underexplored Archean greenstone strike
- Well-defined, near-term drill targets over four zones, based on over 100 years of exploration data from 176 diamond drill holes totaling approximately 20km
- Direct road access, close to rail and power
- Discovery and development of Rainy River lead the district in the 1990s, which is now over 14Moz and growing

EARN-IN WITH HERITAGE MINING

- Definitive agreement (as amended) signed November 2021 grants Heritage right to earn up to a 90% interest over five years by:
 - Issuing 16.45M shares and 3M warrants, plus \$170,000 cash
 - Completing \$5M in exploration
 - Granting SWCM a 10% carried interest through Feasibility Study
 - Paying up to \$10M in discovery bonuses at \$1/oz Au or AuEq

Kluane PGE-Ni-Cu project

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Premier land position in an emerging, world-class Canadian PGE-Ni-Cu district

OVERVIEW

- Kluane Mafic-Ultramafic belt extends 600 km from northern British Columbia to central Alaska and hosts known PGE-Ni-Cu deposits
- 100% ownership in four claim blocks
- The multi-million-ounce Wellgreen PGE-Ni-Cu-Co deposit demonstrates the world-class potential of the belt
- Similar geology to largest known PGE-Ni-Cu deposits including the Bushveld and Stillwater complexes

NEAR-TERM PRIORITY

- Continue ongoing discussions re best avenue to monetize asset
- Undertake modest surface exploration program to expand known mineralization, refine targets

Other Assets

Duke Island (SE Alaska)

Significant Cu-Ni-PGE asset, with CO₂ sequestration and geoH₂ potential

- 100% owned
- Significantly elevated Cu, Ni, and Fe relative to most Ural–Alaska complexes
- up to 1.95% Cu, 0.25% Ni and 1g/t combined PGEs in mafic/ultramafic host rocks
- Past drilling has encountered up to 387 feet of disseminated and semi massive sulfide mineralization with Cu and Ni grades
- Multiple targets - only the Marquis target has been partially tested by drilling

Airborne and surface geophysical surveys indicate a possible feeder dike at depth has not yet been penetrated by deep drilling

Yankee-Dundee Mine (SE British Columbia)

Potential Royalty Revenues, Back-in Rights

- Stillwater consolidated the historic Ymir Camp, once the largest silver producer in the British Commonwealth
- Total production 883,000 tonnes @ 10g/t Au and 60g/t Ag (over \$500M gross today)
- Property was sold in 2013 for:
 - \$50,000 annual Advance Royalty payments
 - \$1.5M production payments plus 2.5% royalty
 - \$4M total buy-out on royalties and production payments
- **Stillwater maintains a back-in right for the property**

The Yankee Girl Mine Mill, Wildhorse Adit, and Ymir Mine
