

Securing the Future of U.S. Critical Mineral Supply

2026 MRE UPDATE OUT NOW

Forward-Looking Statements

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

FORWARD-LOOKING INFORMATION

This presentation contains certain forward-looking statements that reflect the current views and/or expectations of Stillwater Critical Minerals Corp. (the “Company”, “Stillwater Critical Minerals”, or “SWCM”) with respect to its business and future events including statements regarding its exploration plans and the Company’s expectations respecting future exploration results, the markets for the minerals underlying the Company’s projects, and growth strategies. Forward-looking statements are based on the then-current expectations, beliefs, assumptions, estimates and forecasts about the business and the markets in which the Company operates. Investors are cautioned that all forward-looking statements involve risks and uncertainties, including: the inherent risks involved in the exploration and development of mineral properties, the uncertainties involved in interpreting drill results and other exploration data, the uncertainties respecting historical resource estimates, the potential for delays in exploration or development activities, the geology, grade and continuity of mineral deposits, the possibility that future exploration, development or mining results will not be consistent with the Company’s expectations, accidents, equipment breakdowns, title and permitting matters, labour disputes or other unanticipated difficulties with or interruptions in operations, fluctuating metal prices, unanticipated costs and expenses, uncertainties relating to the availability and costs of financing needed in the future and regulatory restrictions, including environmental regulatory restrictions. These risks, as well as others, including those set forth in the Company’s filings with Canadian securities regulators, could cause actual results and events to vary significantly. Accordingly, readers should not place undue reliance on forward-looking statements and information. There can be no assurance that forward-looking information, or the material factors or assumptions used to develop such forward-looking information, will prove to be accurate. The Company does not undertake any obligations to release publicly any revisions for updating any voluntary forward-looking statements, except as required by applicable securities law.

TECHNICAL INFORMATION

The scientific and technical information in this presentation has been reviewed by the following non-independent qualified persons (as defined in NI 43-101): (a) in respect of the Stillwater West Project, Mike Ostenson, P. Geo., who is a Project Geologist of the Company; and (b) all other projects of Stillwater Critical Minerals, Debbie James, P. Geo, who is an independent consultant to the Company.

Mineral resources which are not mineral reserves do not have demonstrated economic viability. With respect to “indicated mineral resource” and “inferred mineral resource”, there is a great amount of uncertainty as to their existence and a great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of a “measured mineral resource”, “indicated mineral resource” or “inferred mineral resource” will ever be upgraded to a higher category.

CAUTIONARY NOTE TO U.S. INVESTORS REGARDING RESOURCE ESTIMATES

The terms “mineral resource”, “measured mineral resource”, “indicated mineral resource”, “inferred mineral resource” used herein are Canadian mining terms used in accordance with NI 43-101 under the guidelines set out in the Canadian Institute of Mining and Metallurgy and Petroleum (the “CIM”) Standards on Mineral Resources and Mineral Reserves, adopted by the CIM Council, as may be amended from time to time. These definitions differ from the definitions in the United States Securities & Exchange Commission (“SEC”) Industry Guide 7. In the United States, a mineral reserve is defined as a part of a mineral deposit which could be economically and legally extracted or produced at the time the mineral reserve determination is made. While the terms “mineral resource”, “measured mineral resource”, “indicated mineral resource”, and “inferred mineral resource” are recognized and required by Canadian regulations, they are not defined terms under standards in the United States and normally are not permitted to be used in reports and registration statements filed with the SEC. As such, information contained herein concerning descriptions of mineralization and resources under Canadian standards may not be comparable to similar information made public by U.S. companies in SEC filings. Accordingly, information herein containing descriptions of our mineral deposits may not be comparable to similar information made public by US companies subject to the reporting and disclosure requirements under US federal securities laws and the rules and regulations thereunder.

THIRD-PARTY INFORMATION

Where this presentation quotes any information or statistics from any external source, it should not be interpreted that the Company has adopted or endorsed such information or statistics as being accurate. Some of the information presented herein, including scientific and technical information on third-party projects, is based on or derived from statements by third parties, has not been independently verified by or on behalf of the Company and the Company makes no representation or warranty, express or implied, respecting the accuracy or completeness of such information or any other information or opinions contained herein, for any purpose whatsoever. References to third-party projects herein are for illustrative purposes only and are not necessarily indicative of the exploration potential, extent or nature of mineralization, or potential future results of the Company’s projects.

Portfolio & Strategy

Our Projects

- 100% ownership on two district-scale assets that are adjacent to world-class mines/deposits
- 49% ownership on district-scale high-grade gold asset in northwest Ontario
- 100% ownership of the Duke Island Ni-Cu-PGE project, Alaska
- Back-in right on past-producing Yankee-Dundee Mine, BC

FLAGSHIP ASSET

STILLWATER WEST PROJECT

- World-class geology shared with Sibanye-Stillwater
- Active and historic mining district with
- Exceptional expansion potential

2026 NI43-101 mineral resource estimate:

- Inferred: 4.8 Blbs Ni-Cu-Co + 7.4 Moz Pd-Pt-Rh-Au
- Indicated: 190 Mlbs Ni-Cu-Co + 359 Koz Pd-Pt-Rh-Au

Why is Stillwater Critical?

Stillwater West is a World-Class U.S. Critical Minerals Asset

LARGE-SCALE POLYMETALLIC DISTRICT

10 U.S. critical minerals across a 33 km district-scale system

GRADE WITHIN SCALE

High-grade, mid-grade, and bulk tonnage grade polymetallic deposits provide options for mining, market resilience, and interest for major producers

APPLYING PROVEN PLATREEF MINE MODELS

As one of the largest layered complexes in the world, the Stillwater district is famously metal-rich, with parallels to South Africa's Bushveld complex

STRATEGIC U.S. LOCATION

The only primary platinum and palladium active mining district in the USA, adjacent to Sibanye-Stillwater's producing mine complex in Nye, Montana

FULLY FUNDED FOR 2026 PROGRAM

\$17M bought deal financing completed December 2025

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

HISTORY

100+ years of mineral production, including government subsidies

EXPERIENCED TEAM

Veteran mine builders with Glencore as strategic partner and senior ex-Ivanhoe geologists to guide expansion

INFRASTRUCTURE

Road access, nearby power, rail, and proximity to a producing district

NEAR-TERM CATALYSTS

Updated MRE • Current drill program
Government-supported initiatives

Stillwater's Mission

Securing Critical Mineral Supply in the USA

The Largest Nickel - Platinum Group Metal Project in an Active U.S. Mining District

Stillwater Critical Minerals is focused on advancing world-class resources of **10 critical minerals** at our flagship Stillwater West Ni-Cu-Co-PGE-Cr + Au project in the iconic Stillwater mining district in Montana, USA.

Vision: Become a primary U.S. source of high-priority critical minerals

Well positioned with a world-class team and geology in an expanding and famously metal-rich U.S. mining district

10 minerals that have been identified by the U.S. as critical to the nation's economy, security and electrification

Success in Advancing Major Mining Projects

Michael Rowley

President & CEO, Director

Co-founder of Stillwater Critical Minerals with over 30 years of executive experience in the exploration, mineral processing, and mine environmental industries.

Danie Grobler, Ph.D.

Vice-President, Exploration

World-recognized expert in battery and platinum group metals. 25+ years experience in global exploration, including Head of Geology and Exploration for Ivanhoe Mines.

Albie Brits, P.Geo.

Senior Geologist

28+ years focused on the advancement of projects from grassroots to production. Former Senior Geologist and Manager Project Geology for Ivanhoe Mines.

Greg Johnson

Executive Chairman

More than 30 years in exploration, development of large-scale mining projects raising over \$650 million in project financing. Co-founder of NovaGold Resources.

Gregor Hamilton

Independent Director

Over 29 years experience in mining sector as a geologist, investment banker and entrepreneur. Global experience in capital markets, M&A and structured finance.

Nora Pincus

Independent Director

16+ years senior experience in mine law and finance focused on global capital markets and M&A. Currently Managing Director at Beedie Capital, with past senior roles at Empress Royalty and Nebari Partners.

Gordon Toll

Independent Director

Over \$5B raised in the resource industry with 50+ years experience. Past senior roles with Ivanhoe Mines and Fortescue Minerals, BHP Billiton, and Rio Tinto.

Bradley Adamson

Independent Director

Over 25 years of global experience in nickel and cobalt metallurgy and investments with Glencore PLC, including as V-P Business Development for the nickel group.

Prof. Wolfgang Maier, Ph.D.

Senior Geologic Advisor

25+ years global experience in mafic-ultramafic igneous systems and formation of magmatic ore deposits. 144 publications receiving 5,175 citations to date.

Stillwater with the Federal Delegation from Montana, Feb 2025 (L-R):
 Senator Tim Sheehy,
 Rep. Troy Downing,
 Stillwater CEO Michael Rowley,
 Senator Steve Daines,
 Rep. Ryan Zinke

Congressman Troy Downing at Stillwater West core shack October 2024:
 Quinton Winsted (USG),
 Ben Raffety (MMA),
 Will Boone (USG),
 Michael Rowley (CEO),
 Congressman Troy Downing,
 Heather Downing,
 Justin Modroo (Stillwater)

Tory Kolkhorst, Senator Steve Daines' Field Representative, at Stillwater West September 2024

Stillwater CEO Michael Rowley presents Stillwater West and discusses U.S. critical mineral supply chains with Congressman Troy Downing

Recent Events:

March 20, 2025 – The White House issues an Executive Order entitled 'Immediate Measures to Increase American Mineral Production' continuing the government's focus on rapidly building domestic supply chains.

May 2, 2025 – The White House includes Sibanye's Stillwater Mine on the second list of priority mining projects, recognizing the importance of the Stillwater district in critical mineral production.

January 2026 – US government stockpiling minerals, especially copper, platinum and palladium, also nickel.

March 6, 2026 – Rep. Troy Downing appointed to House Committee on Natural Resources

Stillwater West

Montana - Resource Industries

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

A history of responsible production and mineral wealth:

- 1852 gold rush
- Dominant North American copper producer by WWI
- **24Blbs of copper to date from Butte area**
- Oil, gas, coal, and mining are major revenues for the state
- A major source of copper, chromium, PGMs, gold, silver, other commodities
- Feb 9th declared Montana Mining Day

Recent industry and government events:

1. Sibanye-Stillwater receives 45X tax credits at its smelter-refinery complex
2. FAST-41 at Sibanye's Stillwater Mine
3. FAST-41 at Hecla's Libby project
4. Ivanhoe JV with Brixton Metals at Hog Heaven: \$44.5M for 75%
5. \$1.67B loan from DoE for Montana Renewables' biofuels plant
6. Rio Tinto and USGS partnered for Earth MRI project targeting critical minerals
7. Black Butte Mine receives final permits
8. Bozeman receives Federal funding as a tech hub for photonics, other tech

2: Based on publicly disclosed production statistics of Sibanye-Stillwater including most recent CPR: <https://www.sibanyestillwater.com/business/reserves-and-resources/>

3: See news release August 27, 2026. Mineral Resources are reported at cut-off grades of 0.20% NiTEq.

Stillwater West

Correct Location in a World-Class Complex Adjacent to Producing Mines

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

STILLWATER IGNEOUS COMPLEX
Area Enlarged in Cross-Section

Simplified schematic cross-section
of the Stillwater Igneous Complex

Platreef Setting

- Big, bulk tonnage 'contact-type' Ni/Cu sulphide deposits with PGEs and gold
- Location of Stillwater Critical Minerals' deposits (surface to 400m depth)
- Global examples include the giant mines on the north limb of the Bushveld (or Platreef): Ivanhoe's Platreef mine and Valterra Platinum's Mogalakwena mine

Platreef-Style Deposits

The World's “Porphyry-Scale” Critical Minerals Deposits

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Platreef-style deposits

The two mines on the Platreef are the largest nickel producers in South Africa and are among the very largest and most profitable nickel and PGE mines in the world.

The Stillwater Layered Mafic-Ultramafic Complex is among the top five largest in the world and shares many similarities with the South Africa's Bushveld Complex.

Ivanhoe's Platreef mine shares the Platreef for a strike length of about 4km. Stillwater West covers the entire lower Stillwater complex at about 33km in length.

IVANHOE MINES

15 Blbs Ni+Cu & 152 Moz PGEs³

Large-scale, low-cost production since 1993

- These world-class mines demonstrate the scale, longevity, and low-cost polymetallic production potential Stillwater is targeting in similar geology in Montana, USA
- Stillwater West's current resources of 4.8 Blbs Ni+Cu+Co plus 7.4 Moz Pd+Pt+Rh+Au (Inferred, plus lesser amounts of Indicated) are in four deposits across 10km, with demonstrated expansion potential across the 33km-long project

Resource Estimate

World-Class Grade and Scale in a Producing American District

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

- Combination of grade and scale provides optionality on mine methods, and economic resilience
- 316% tonnage increase driven by drill programs and refined geological model demonstrating **low discovery cost**
- Significant expansion and upgrade potential **(includes first ever Indicated Resource)**
- 6.6Blbs chromium** (inferred, not included in equivalents to date)

GRADE & SCALE	BATTERY METALS 	PGE + GOLD (4E) 
BASE CASE 0.20% NiTEq cut-off 0.84% Sulphur	4.82 Blbs Inferred: 805.1 Mt at 0.34% NiTEq Plus 29.4 Mt at 0.38% NiTEq Indicated	7.43 Moz
HIGHER GRADE 0.35% NiTEq cut-off 1.46% Sulphur	2.36 Blbs Inferred: 254.5 Mt at 0.51% NiTEq Plus 12.3 Mt at 0.47% NiTEq Indicated	3.47 Moz
HIGH-GRADE 0.50% NiTEq cut-off 2.06% Sulphur	1.15 Blbs Inferred: 83.0 Mt at 0.71% NiTEq Plus 5.28 Mt at 0.54% NiTEq Indicated	1.24 Moz

See news release August 27, 2026. Mineral Resources are reported within a constraining pit shell at NiTEq cut-off grades of 0.20%, 0.35% and 0.50%. NiTEq is based on metal prices of US\$8.00/lb Ni, US\$4.50/lb Cu, US\$11.00/lb Co, US\$1,250/oz Pt, US\$1,250/oz Pd, US\$3,000/oz Au and US\$6,500/oz Rh, with assumed recoveries of 80% for Ni, Co, Pt, Pd, Au and Rh and 85% for Cu. Pit-shell assumptions include US\$2.50/t mining costs, US\$18/t processing costs and a 50° pit slope. Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability. Tonnage and contained metal are rounded, and equivalent grades and contained metal do not include Cr.

Polymetallic Value

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Value at 2026 Resource and Current Prices ¹: Attractive and 'Internally Diversified' Commodity Blend

Nickel

3.01 Blbs

Nickel demand continues to grow, driven by EV and alloy demand. Growing environmental and geopolitical concerns with Indonesia/China and Russia as major suppliers.

Chromium

6.6 Blbs

Stillwater district has a long history of **chromium** production (not included in equivalents).

Gold

864 Koz

Gold at co-product levels across Stillwater West, plus drill-defined high-grade gold the Pine target.

Cobalt

283 Mlbs

Export restriction from the Congo have driven **cobalt** prices based on demand from batteries and military superalloys.

Copper

1.52 Blbs

Copper prices are at record highs due to supply challenges and surging demand from electrification, data centers, and AI.

Palladium

3.97 Moz

Palladium is the catalyst of choice to meet emissions requirements in the majority of ICE applications.

Platinum is the catalyst of choice in hydrogen fuel cells, and also in the production of green hydrogen. Currently in supply deficit.

Rhodium is primarily used in catalyst converters and industrial/military applications.

Platinum

2.28 Moz

Rhodium

310 Koz

The lesser PGMs **ruthenium** and **iridium** have been confirmed but not inventoried to date in the polymetallic deposit.

Platinum Group Metals

Nickel Demand Drivers

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Listed as a 'high priority critical mineral' by the US DIBC, with the objective of securing domestic supplies for energy and security

Supported by government and listed as a critical mineral by the US, Canada, EU and Australia.

Nickel will make up to 80% of the mass in cathodes

80% Ni

New supply will be required to meet the 15.6x demand growth projected for 2030

Demand by First Use Applications

Demand Increase in Battery Metals 2019 to 2030

NICKEL SUPPLY / DEMAND

Global Structural Supply Gap for Battery-Grade Nickel

Even with all announced projects, additional nickel supply will be required to meet growing demand through 2040.

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Battery-Grade Nickel

Nickel sulphide is the preferred source for battery-grade nickel with lower carbon intensity

Demand Continues to Grow

Electrification, energy storage and industrial applications drive long-term demand.

Limited New Supply

Few large-scale sulphide discoveries have been made in the past decade. Project development takes time.

- ~1.1 Mt (2.4 billion lbs) annual nickel supply gap projected by 2040
- Existing and announced mine supply meets only ~81% of projected 2040 primary nickel requirements
- The supply deficit widens from just 0.06 Mt in 2024 to 1.08 Mt by 2040, highlighting the need for significant new mine development

Nickel Supply vs. Primary Supply Requirements

Mt of Contained Nickel

PGE Demand Drivers

Growing, Multi-Sector Demand for Platinum Group Elements

PGEs are designated as ‘critical minerals’ by the USGS, with the objective of securing domestic supplies from America’s ONLY PGE district

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Critical Minerals

PGEs are critical to energy security and support resilient, domestic supply chains.

Automotive

Catalytic converters remain the largest source of platinum and palladium demand.

Defense & Aerospace

PGEs are essential in aerospace alloys, electronics and defense applications.

Hydrogen Economy

Platinum is a critical catalyst in PGE electrolyzers and hydrogen fuel cell technologies.

DEMAND BY END USE (2024E)

GLOBAL PGM MINE SUPPLY BY COUNTRY (2024E)

Copper Demand Drivers

Electrification and infrastructure investment are accelerating copper demand

Electrification
Copper demand continues to grow as transportation and infrastructure electrify.

Electric Vehicles
Battery electric vehicles use several times more copper than conventional vehicles.

Grid Expansion
Modernizing power grids and renewable energy for AI data centers require significant copper investment.

Battery Materials
Essential for battery packs, high-voltage wiring and charging infrastructure, supporting the transition to electric transportation.

PROJECTED COPPER DEMAND

Million tonnes

COPPER USE BY VEHICLE TYPE

Kilograms of copper

Chromium Demand Drivers

Essential for Stainless Steel and Industrial Infrastructure

TSX-V: **PGE** OTCQB: **PGEZF** FSE: **JOG**

Stainless Steel

Approximately 85-90% of global chromium demand comes from stainless steel production.

Infrastructure

Chromium improves corrosion resistance and durability in construction and industrial equipment.

Aerospace & Defense

High-strength chromium alloys are used in aerospace, defense and high-temperature industrial applications.

Critical Mineral

Chromium is designated a U.S. critical mineral supporting secure domestic manufacturing and national security.

CHROMIUM DEMAND BY END USE (2024E)

% of total chromium demand

GLOBAL CHROMIUM SUPPLY (2024E)

% of global chromite production

Stillwater West

Stillwater West

Strike Section Through Chrome Mountain Along 1,300 Meters

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Strike section through 2026 Mineral Resource estimates at Chrome Mountain along 1,300 meters of the Stillwater Complex.

Note: Strike Section Looking Northeast

Stillwater West

Strike Section Through Iron Mountain Along 2,900 Meters

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Strike section through 2026 Mineral Resource estimates at Iron Mountain along 2,900 meters of the Stillwater Complex.

Note: Strike Section Looking Northeast

Stillwater West

Crescent Deposit

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Strike section through the 2026 Mineral Resource estimate at the Crescent deposit at Iron Mountain Showing 600 Meters of the Stillwater Complex.

Note: Strike Section Looking Northeast

Peer Comparison by Market Cap

North and South American Ni-PGE-Cu-Co-Peers

TSX-V: **PGE** OTCQB: **PGEZF** FSE: **JOG**

Source: Company filings and corporate presentations. Market data as of July 25, 2026.

Stillwater trades at one of the lowest market capitalizations among comparable resource and development-stage companies.

Stillwater remains one of the lowest-valued Ni-PGE-Cu-Co resource-stage companies in the America's despite one of the largest U.S. critical mineral resources, including rhodium and chromium – In the only active PGE producing district in USA

Milestones and Catalysts

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

2017 - 2020

- Initial property acquisition
- District consolidation
- Multiple drill campaigns
- First IP survey
- 3D geological model established
- Platreef model confirmed
- Collaboration with USGS

2021 - 2023

- **Two Mineral Resource Estimates**
- **Glencore strategic investment**
- Expansion drill campaigns
- Expanded geophysics
- Heritage earn-in agreement
- Technical team and board strengthened
- Geologic model refinement
- DOE-funded Cornell research

2024 - 2025

- **\$29M+ raised, including Glencore**
- MMT geophysical survey completed
- DOE-funded LBL research
- **Geologic model expanded to 20+ km**
- Largest drill campaign to date

2026 & Beyond

- **2026 Mineral Resource Estimate**
- **Current expansion drill campaign**
- Future resource upgrade drilling
- Metallurgical studies with Columbia
- PEA and pre-feasibility level studies
- Government-supported initiatives
- Advancements on non-core projects:
 - Kluane
 - Heritage Mining
 - Duke Island
 - Yankee-Dundee

Value Creation Through Project Advancement

Potential 5-10x Increase in Enterprise Value from Resource Growth Through Feasibility

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Capital Structure

And Relative Share Price Performance

Share price (as of August 26, 2026)	C\$0.40
Shares issued & outstanding	310M
Options (avg. exercise price: \$0.23)	20M
Warrants (avg. exercise price: \$0.40)	71M
Fully diluted shares	402M
Market capitalization (basic)	~C\$125M
Cash* & cash equivalents (no debt)	~C\$15.4M*

FINANCINGS:

- * \$17M financing closed December 30, 2025
- * \$8.78M financing closed August 2025, including third investment by Glencore

SECURITIES HELD:

- 15M Heritage Mining shares (HML) plus 3M warrants

OTHER ASSETS

Drayton - Black Lake

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

49% Owner With Heritage Mining on a High-Grade Gold Project in the Active Rainy River District

OVERVIEW

- 142 km² land package adjoining NexGold's +3Moz Goliath Gold Complex (formerly Treasury Metals)
- 30km of underexplored Archean greenstone strike
- Well-defined, near-term drill targets over four zones, based on over 100 years of exploration data from 176 diamond drill holes totaling approximately 20km
- Direct road access, close to rail and power
- Discovery and development of Rainy River lead the district in the 1990s, which is now over 14Moz and growing

EARN-IN WITH HERITAGE MINING

- Definitive agreement (as amended) signed November 2021 grants Heritage right to earn up to a 90% interest over five years by:
 - Issuing 16.45M shares and 3M warrants, plus \$170,000 cash
 - Completing \$5M in exploration
 - Granting SWCM a 10% carried interest through Feasibility Study
 - Paying up to \$10M in discovery bonuses at \$1/oz Au or AuEq

Kluane PGE-Ni-Cu project

TSX-V: **PGE**

OTCQB: **PGEZF**

FSE: **JOG**

Premier land position in an emerging, world-class Canadian PGE-Ni-Cu district

OVERVIEW

- Kluane Mafic-Ultramafic belt extends 600 km from northern British Columbia to central Alaska and hosts known PGE-Ni-Cu deposits
- 100% ownership in four claim blocks
- The multi-million-ounce Wellgreen PGE-Ni-Cu-Co deposit demonstrates the world-class potential of the belt
- Similar geology to largest known PGE-Ni-Cu deposits including the Bushveld and Stillwater complexes

NEAR-TERM PRIORITY

- Continue ongoing discussions re best avenue to monetize asset
- Undertake modest surface exploration program to expand known mineralization, refine targets

Other Assets

Duke Island (SE Alaska)

Significant Cu-Ni-PGE asset, with CO₂ sequestration and geoH₂ potential

- 100% owned
- Significantly elevated Cu, Ni, and Fe relative to most Ural–Alaska complexes
- up to 1.95% Cu, 0.25% Ni and 1g/t combined PGEs in mafic/ultramafic host rocks
- Past drilling has encountered up to 387 feet of disseminated and semi massive sulfide mineralization with Cu and Ni grades
- Multiple targets - only the Marquis target has been partially tested by drilling

Airborne and surface geophysical surveys indicate a possible feeder dike at depth has not yet been penetrated by deep drilling

Yankee-Dundee Mine (SE British Columbia)

Potential Royalty Revenues, Back-in Rights

- Stillwater consolidated the historic Ymir Camp, once the largest silver producer in the British Commonwealth
- Total production 883,000 tonnes @ 10g/t Au and 60g/t Ag (over \$500M gross today)
- Property was sold in 2013 for:
 - \$50,000 annual Advance Royalty payments
 - \$1.5M production payments plus 2.5% royalty
 - \$4M total buy-out on royalties and production payments
- **Stillwater maintains a back-in right for the property**

The Yankee Girl Mine Mill, Wildhorse Adit, and Ymir Mine
